

The answer to farm plastic waste recycling is in the bin

AGRI Waste Stream 1

- Silage Wrap
- Silage Pit Covers
- Small Polythene Feed and Fertiliser Bags
- Plastic Packaging

AGRI Waste Stream 2

- Bulk Fertiliser Bags including Liner
- Bulk Feed Bags
- Bulk Seed Bags

AGRI Waste Stream 3

- Rigid Plastic Drums and Containers (must be Triple Rinsed and Metal Handles removed)

AGRI Waste Stream 4

- Net Wrap or Plastic String

Based in County Antrim, Northern Ireland, Emerald Isle Recycle manages various plastic recycling operations throughout Ireland.

Waste plastic collected from different waste streams is processed to recover the polymer, which in turn is used to manufacture a wide range of recycled plastic products ranging from domestic bin liners to the plastic bin used in the Solway Recycling system. For every 1 tonne of recycled polythene produced, 1.8 tonnes of crude oil is saved.

BIN & LINER SYSTEM (Patent Pending)

Six simple steps to a tidy farm and fulfilment of farm waste regulations

Step 1

Assemble the patented Solway Recycling bin by locking the bin edges together, fit the plastic liner and pull halfway down the outside of the bin as shown. Finally fit the lid.

Step 2

Keep the bin next to the source of the waste, and transfer materials straight away. This reduces contamination and keeps your farm tidy.

Step 3

Once the bin is filled, remove lid and tie liner securely with plastic twine or cable tie.

Step 4

Store filled liners in a secure site with suitable access for the collection lorry.

Step 5

Liners will be uplifted by our collection lorry on a pre-arranged day. All liners will be visually inspected to ensure they contain the correct material. The driver will tag each liner for traceability purposes.

Step 6

CAUTION:

Don not mix the 4 streams of plastic in any one liner. See over for details

CERTIFICATION

All farms operating this recycling system will receive a Waste Management Policy. Each waste transaction will generate individual Duty of Care Waste Transfer Notes. The Waste Policy will build up to show all of the farm's waste collection dates, the volumes and types of material.

SCHEME NON-COMPLIANCE

All liners will be inspected prior to collection. They will not be uplifted if they are found to contain excluded material, or if they are incorrectly tied. If foreign materials are found during processing the liner and contents will be rejected, quarantined and disposed of correctly. Additional charges will be passed on to the farm or holding that supplied the waste.
